

**FUELING
INFRASTRUCTURE**

**PROJECT
ANNOUNCEMENT**

In support of Clean Cities alternative fuel infrastructure projects, CleanFUEL USA in collaboration with Conoco Phillips and the Propane Education & Research Council, will be partnering with selected Clean Cities Coalitions across the country to establish sustainable Propane (Autogas) fuel markets for fleets and consumers.

The proposed CleanFUEL USA (CFUSA) Propane (Autogas) stations will be located at Conoco Phillips branded fueling stations to provide 24-hour fueling access for fleets and consumers who utilize Propane (Autogas) vehicles. The first of its kind, this project will institute a regional CleanFUEL USA network of fueling stations to provide fueling, fuel safety training and regional sales support staff for fleets as well as public outreach activities.

CFUSA and Conoco-Phillips will be installing Propane (Autogas) stations in over 20 major cities over the next few years. The first round of funding for Clean Cities projects was finalized March 31, 2009, with the second and third rounds of funding due in May and September of 2009. CFUSA requests that interested Clean Cities Coalitions contact us as soon as possible to register for the program.

Propane's engine fuel performance, affordability, environmental qualities and availability in the United States is **rapidly advancing** LPG vehicle use.
